SUMMARY

Full Stack Developer with hands-on experience building production-style features using React, Next.js, NestJS and Node.js, backed by PostgreSQL and Redis. Worked on microservices with RabbitMQ event-driven communication, multi-tenant schema-based architecture, and real-time features (SSE, WebSockets). Practices DDD and TDD. Solved 300+ problems on LeetCode. B.Tech CSE graduate (2026).

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), C++, SQL, HTML5, CSS3
Frontend: React.js, Next.js, Redux Toolkit, Material UI (MUI), Tailwind CSS, React Hook Form, Zod
Backend: Node.js, NestJS, Express.js, RESTful APIs, HATEOAS, WebSockets, Server-Sent Events (SSE)
Databases & ORMs: PostgreSQL, Redis, MikroORM, TypeORM
Architecture: Microservices, Domain-Driven Design (DDD), CQRS, Event-Driven Architecture, Multi-Tenancy
Messaging: RabbitMQ, Socket.io
Tools & Practices: Docker, Git, GitHub, Test-Driven Development (TDD), Data Structures & Algorithms (300+ LeetCode problems), OOP

EXPERIENCE

Full Stack Developer Intern — January 2026 – Present

Zenmonk — *India*

- Built a QR-based attendance system with Server-Sent Events (SSE) for real-time updates, reducing manual attendance tracking effort by 70% (estimated).
- Implemented QR code generation, GPS-based location validation, and duplicate-attendance prevention to enforce eligibility and keep attendance data accurate.
- Contributed to 4 microservices using NestJS, implementing RabbitMQ event-driven communication with retry handling for reliable, decoupled service-to-service messaging, plus HTTP clients for direct integration.
- Built multi-tenant functionality with MikroORM and PostgreSQL schema-based separation to isolate tenant data.
- Developed survey configuration APIs and optimized queries involving complex entity associations to reduce redundant database calls, applying DDD and SRP to keep business logic modular.
- Built frontend forms with React.js, React Hook Form and Zod for type-safe validation; integrated them with backend APIs.
- Applied TDD and clean-code principles to improve testability and maintainability of backend services.

Full Stack Developer Intern — April 2025 – May 2025

SparkScale — *India*

- Developed backend REST APIs for a task management system using Node.js and Express.js.
- Integrated the APIs with a Next.js and TypeScript frontend for end-to-end task creation and tracking.

PROJECTS

- **Udaan – Professional Networking Platform** — Next.js, Redux Toolkit, PostgreSQL, Docker, Redis, RabbitMQ, Socket.io, MUI — GitHub
  - Designed a microservices-based networking platform with Next.js and PostgreSQL, containerized with Docker.
  - Used RabbitMQ for asynchronous notification processing, decoupling producers and consumers targeting a 30% reduction in synchronous request processing time.
  - Added Redis caching for frequently accessed data to reduce repeated database queries, targeting a 40% improvement in response times.
  - Built authentication, connection management and profile customization with a responsive UI (Material UI, Tailwind CSS); real-time updates via Socket.io.
- **Shipment Application – Multi-Tenant Backend** — Node.js, MikroORM, PostgreSQL, DDD, TDD — GitHub
  - Built a multi-tenant shipment application with MikroORM and PostgreSQL, isolating each tenant's data using schema-based separation.
  - Applied DDD to structure business logic into well-separated, maintainable modules.
  - Followed TDD with 45+ unit and e2e tests, reaching 85% line coverage on the domain layer.

ACHIEVEMENTS

- Solved **300+** Data Structures & Algorithms problems on LeetCode.

EDUCATION

Chandigarh College of Engineering and Technology — 2022 – 2026

B.Tech, Computer Science and Engineering – ***CGPA: 7.8*** — *Chandigarh, India*
